

VISHWANATH R

AI Engineer | GenAI / LLM Specialist | AI Fullstack Developer

UAE (Visit Visa – Immediately Available)

+971 508399243 | vishwanathamrish@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

AI Engineer and Full-Stack Developer with 1+ year of experience delivering production-grade AI systems, LLM-powered platforms, and intelligent automation solutions across four live enterprise products. Specialized in Generative AI, RAG, AI Agents, NLP, and full-stack development using Python and FastAPI. Holds an M.Sc. in Data Science & Business Analytics — currently in the UAE on a Visit Visa and immediately available.

CORE SKILLS & TECHNOLOGIES

Programming: Python, SQL

Generative AI & LLMs: LLM Applications, Retrieval-Augmented Generation (RAG), AI Agents, Prompt Engineering, Semantic Search

Machine Learning: Supervised & Unsupervised Learning, Feature Engineering, Model Evaluation, Natural Language Processing (NLP), Transformer Models

Deep Learning: Neural Networks, CNNs, RNNs, Transfer Learning, Transformer Fine-Tuning

Statistics: Descriptive & Inferential Statistics, Probability, Hypothesis Testing, Regression Analysis

Frameworks & Backend: FastAPI, LangChain, Streamlit

Libraries & Frameworks: Hugging Face Transformers, FAISS, Scikit-learn, Pandas, NumPy

Deployment & DevOps: Docker, Git, GitHub, REST API Design, Cron Jobs, Celery

Data Integration: HikVision Biometric System Integration, Device-to-Server Data Synchronization

Analytics & BI: Power BI, Microsoft Excel

Automation Tools: n8n, Flowise

Development Tools: VS Code, Google Colab

Languages: English (Professional), Tamil (Native)

PROFESSIONAL EXPERIENCE

AI Engineer | [DigiDARA Technologies Pvt Ltd](#) | Tiruchirappalli, India

May 2025 – May 2026

Project 1: DigiDARA AI Academy – Full-Stack AI-Powered LMS | Role: Project Lead & Full-Stack AI Developer

Live: digidaraaiacademy.com

- Led the end-to-end delivery of DigiDARA AI Academy — an AI-powered Learning Management System — overseeing the full product lifecycle from architecture and frontend development to backend engineering, admin systems, and AI integration
- Engineered a robust backend using Python & FastAPI encompassing a structured course delivery engine, secure timed-assessment framework, automated result evaluation, and digital certificate generation pipeline — reducing manual certification overhead by ~80%; complemented by a responsive frontend covering learner dashboards, course catalogue, enrollment flows, exam UI, and certificate access
- Built a centralized Admin Control Panel for end-to-end platform management — course configuration, learner administration, exam scheduling, certificate issuance, and real-time analytics; integrated a fully automated email notification system covering enrollment confirmations, exam reminders, result alerts, and certificate delivery
- Deployed two context-aware AI Chatbots: (1) a Platform Assistant for general LMS navigation, course discovery, and learner onboarding; (2) a Course-Specific Doubt Clarification Chatbot trained on individual course content to resolve learner queries in real time — improving learning outcomes and reducing instructor dependency

Project 2: Career Mate AI Agent – KNCET Career Portal | Role: AI Backend Developer | Live: kncetcareer.in

- Contributed to the development of Career Mate — an AI-enabled institutional career platform designed to bridge the gap between students and industry; engineered automated job aggregation pipelines complemented by an LLM-powered career agent delivering personalised job recommendations and career guidance through an intelligent conversational interface with real-time REST API connectivity
- Architected structured student placement tracking workflows (application → interview → offer) providing end-to-end funnel visibility; developed institution-wide analytics dashboards surfacing placement performance metrics, top recruiting companies, offer trends, and department-wise outcomes — empowering administrators with data-driven career strategy insights

Project 3: DigiDARA People – HRMS & Biometric Integration | Role: Full-Stack Developer & AI Engineer

Live: digidarapeople.com

- Developed DigiDARA People — a production-grade HRMS covering Employee Management, Attendance Tracking, and Leave Administration; built a HikVision biometric integration pipeline using Python & FastAPI to retrieve attendance data from device software, store it to the company server database, and auto-sync every 30 minutes via Cron/Celery — eliminating manual entry and saving HR ~2–3 hours daily
- Integrated two AI Chatbots: a pre-login Homepage Assistant for product queries and onboarding guidance; and a post-login Authenticated HR Chatbot connected to live databases and internal APIs — enabling employees and admins to instantly access attendance records, leave balances, and HR information through natural conversation

Project 4: GIA People – Client HRMS Platform | Role: Full-Stack Developer & AI Engineer

Live: giapeople.com

- Client-facing HRMS extending DigiDARA People with additional enterprise features — GPS-based attendance (geo-fenced check-in within 100m of company location) replacing hardware dependency with mobile-based real-time tracking
- Multi-Branch Management: each branch operates independently with its own employee roster, attendance, and leave data; centralized admin dashboard for full cross-branch visibility, easy employee allocation, and branch-level control

AI PORTFOLIO PROJECTS

DOCUMIND – Enterprise AI Document Intelligence System

GitHub: [DOCUMIND-ENTERPRISE-AI](#)

- Enterprise-grade RAG system using FAISS semantic search + LLM response generation; multilingual Arabic & English support targeting Middle East enterprises with multi-turn memory, summarization, and data extraction
- Features dark/light UI, document chunking & embedding pipelines, and API-ready scalable architecture designed for seamless enterprise integration

AI Banking Customer Support System (Arabic & English)

GitHub: [AI-BANKING-CUSTOMER-SUPPORT](#)

- Bilingual LLM-powered UAE banking support system with NLP-based intent recognition, conversational workflows for account/transaction queries, and a Voice Assistant with Dictation (STT) and Voice Mode (TTS) in Arabic & English
- Structured for extension into a full AI agent with tool integration and real-time API connectivity — directly applicable to UAE fintech and banking environments

Real Estate AI Advisor & Lead Capturing System (UAE)

- Building an AI-powered UAE real estate advisor using n8n + Flowise with a dual chat UI (custom & Flowise); fetches live property data via Bayut API and answers investor queries, property recommendations, and UAE market questions
- Engineered AI lead capture: collects investor name & WhatsApp number, stores to Google Sheets, triggers email alerts to company, and classifies leads as Hot/Warm/Cold using AI scoring — with matched property listings emailed for prioritized follow-up

AWARDS & ACHIEVEMENTS

- AI Excellence Star Award (2026) – DigiDARA Technologies Pvt Ltd: Recognized for outstanding contribution in developing AI-driven enterprise systems and delivering high-impact production solutions

EDUCATION

M.Sc. in Data Science & Business Analytics

Vels Institute of Science, Technology & Advanced Studies, Chennai | 2024 | 81%

B.Sc. in Mathematics

Sri Krishna Arts & Science College, Coimbatore | 2022 | 84%

CERTIFICATIONS

- Python, SQL & Excel – Udemy
